

The reference is the standard

A cinematic agricultural command interface. Apply this visual language across the entire game, within the established AgWorld screen geometry.

VISUAL AUTHORITY

User-supplied reference: ChatGPT Image Sep 10, 2026, 09_56_13 PM.png. Match its deep blue-green materials, condensed lettering, teal outlines, lime actions, gold rewards and photographic commanders. This image governs the game look and feel.

FIXED GEOMETRY. COMPLETE VISUAL COVERAGE.

Keep the current navigation rail, player workspace, map, floating Command Center and right-side territory pullout in their approved positions and proportions. Carry the reference treatment into every card, menu screen, tool, form, overlay and state. Interior composition may adapt to the available space.

This edition supersedes V1.3 guidance that calls for light game dashboards. V1.3 logo masters and identity protections continue to apply. Login and loading remain the approved separate surfaces.

Color has a clear job

These are the production game tokens derived from the reference. Logo artwork retains the original master colors and metallic gradients.

SURFACE RECIPE

Main cards: a restrained 125-degree gradient from #042B30 through #001C25 to #001017. Use a 1 px teal border, a subtle inner highlight and a short dark shadow. Reserve visible green glow for selected or focused elements.

Typography and component finish

Condensed, clear and purposeful. Strong headings sit above calm body text; important numbers are larger than their labels.

PLAYER PROFILE

FIELD COMMANDER

AGRICULTURAL TERRITORY

TOTAL XP EARNED

8,450

Production font: Roboto Condensed, self-hosted as AgWorldCondensed. Use weights 400-500 for body text, 600-750 for headings and 750-800 for major actions.

The source image does not identify its font. This family is the chosen visual match; the reference remains the authority for the intended appearance.

TYPE SCALE

Screen titles 24-25 px. Card titles 16-18 px. Player identity 18-24 px. Body text 12-14 px. Compact labels 10-11 px. Hero numbers 23-29 px. Use uppercase for titles and actions; sentence case for readable descriptions.

BUTTONS AND STATES

START MISSION

VIEW DETAILS

SELECTED

Primary: lime gradient and dark lettering. Secondary: dark teal with a fine border. Selected: lime outline with a restrained green inner glow. Focus: a distinct lime outline. Disabled: subdued, with the label still readable.

MATERIAL DETAILS

Main card corners 6-7 px; inner tiles 4-5 px. Header separators are thin teal lines. Use small white or pale-teal symbols with a consistent stroke. Give controls stable hit areas and avoid animation when reduced motion is selected.

Charts, portraits and rewards

Keep the data real. The reference defines the rendering style; the player record defines every displayed value.

RADAR AND PROGRESS

Five canonical skills: Compliance, Sales, Product, Operations and Technical. Draw a fine teal grid, a translucent teal area, a lime outline and small gold points. Place matching values beside the chart.

Use the canonical 25-star skill scale as 0-100% when shown as a progress bar. Zero stays zero. Company aggregates retain their own documented scale.

PORTRAIT-LED CARDS

Player: circular portrait with a lime rim and a separate level badge. Advisors: photographic rectangular portraits, consistent framing, a short discipline name and commander caption. Selected advisors gain a lime edge and glow. A character avatar represents the game persona, not a verified photograph of the person.

MISSION CARDS

Use a photographic agricultural scene, a chapter label, a strong mission title and a concise objective. Present earned rewards in gold and XP in lime. Finish with a prominent lime action. Choose artwork relevant to the mission and keep it subordinate to the content.

MAP AND TERRITORY

Preserve the live satellite map. Apply the same dark material to its tools, statistics, legends and entity cards. Distinguish map categories with color plus shape or text. Never substitute decorative farm counts, scores or example map markers for real game data.

One game. One visual system.

This standard applies to initial load, every navigation route, newly opened windows, hover and focus states, and late data updates.

GEOMETRY CONTRACT

Retain the Version 1 frame owner and the approved relationships: navigation at left; player profile, skill and mission workspace beside it; advisors aligned with the lower Command Center; dominant map at right; territory statistics opening leftward from the right edge. Dashboard returns to the original group of panels.

LOGO AND IDENTITY

Use the existing transparent PNG masters. The stacked mark belongs in the narrow rail at a readable size; use the approved horizontal lockup where space allows. Preserve proportions, the complete spherical lower curve and the signature leaf loop. No screenshot tracing, replacement lettering, manual recoloring or added logo effects.

Minimum digital widths from V1.3: horizontal 180 px, stacked 120 px, icon 32 px. Keep the master palette for identity and print: Lime #B8E620, Growth Green #0D6A38, Deep Forest #0B2C20, Territory Gold #D69212, Metal Silver #D9DAD5 and Warm White #F4F3ED.

RELEASE REVIEW

- 01** Compare the whole game against the supplied reference, including all menu screens and dialogs.
- 02** Confirm the existing outer panel positions and widths at 1280 px and 1600 px.
- 03** Check loaded font and artwork, text contrast, scrolling, chart labels and visible actions.
- 04** Exercise navigation, advisor selection, territory controls, forms, refresh and logout.
- 05** Verify colors remain consistent after delayed data arrives. Use Developer Mode to check runtime health.

Implementation authority: game-reference-theme.css and the component owners. Future work must use these tokens and the guide, extending the shared theme rather than adding competing appearance overrides.
